

FileQuest® - Accelerated Web-based Data Discovery

FileQuest is an advanced Web-based data discovery solution that empowers organizations to seamlessly perform their own data extraction, de-duplication, filtering, processing, review and production of documents. With our robust, fully integrated platform, FileQuest dramatically reduces the time required for data discovery and eliminates the need for your organization to maintain any software or hardware. In other words, FileQuest provides you with accelerated data discovery on-tap with no fixed up-front costs.

Because FileQuest was developed as an easy-to-use flexible solution by litigation support and content management veterans, it provides you with the ability to process massive numbers of files in a short period of time.

FileQuest provides the power to:

- Upload and extract data regardless of operating system or file format
- Setup a case in under a day
- Import data continuously as discovery occurs

- Track all electronic evidence with an audit trail
- Maintain full administrative control
- Profile the data population with accurate page counts
- Distribute the workload among multiple reviewers
- Support foreign text and over 400 file types, including multimedia files
- Deduplicate email and documents
- Design flexible filters based on keywords, date ranges, file types and other key criteria
- Enable legal workflow for review with annotation, redaction, search and advanced tagging capability
- Run document productions, complete with bates numbering, designation stamping and TIFF images as desired
- Export data and images formatted for mainstream litigation case management applications (e.g., Concordance, Relativity, etc.)

At Digital Mountain, we understand that each case is unique and you may have both small and large discovery matters. As a result, we've built FileQuest to provide a simple, flexible solution with on-demand options at your fingertips. Please call us today to learn how to accelerate your data discovery review and gain a competitive edge.
