

Data Discovery Management

If you want to manage a case in the most optimal manner from the start, let Digital Mountain help guide the way. We work with law firms, corporations and government organizations to architect and manage all technical components of a case from the beginning.

With the amendments to the Federal Rules of Civil Procedure (FRCP) in December 2006, it is imperative to understand where Electronically Stored Information (ESI) resides to conduct effective meet-and-confer sessions. Our background working for the largest storage management companies worldwide provides us with a competitive edge to understand and explain complex storage environments residing in corporate America and bridge the gap between legal and IT teams.

By effectively planning your technology needs in advance and evaluating where critical electronic evidence resides, we can support organizations in

assessing the cost versus benefit of pursuing particular actions and optimizing the end result. Additionally, we can help determine what data is reasonably accessible, assist in crafting a litigation hold plan, and inform you of best practices for effective results.

Beyond data discovery management, Digital Mountain offers the following products and services:

- Electronic evidence collection
- Electronic discovery
- Web-based filtering, review & production
- Computer forensics
- Cybersecurity
- Social media preservations & monitoring
- Data conversions
- Tape restorations
- Expert witness services

As part of the discovery management process, we also provide project management of paper-based discovery by choosing and managing the best-of-breed vendors for document imaging, coding, optical character recognition and blowbacks.

If you want to succeed in electronic discovery, engage Digital Mountain at the beginning of the process.
