

Cybersecurity & Breach Management

With sensitive data being connected to the cloud and data breaches increasing exponentially, data security has become one of the most forefront issues faced by organizations. A cybersecurity incident often leads to brand impairment, intellectual property loss, legal exposure or other significant ramifications. Our company offers proactive and incident response solutions as follows:

- Data Security Assessments & Risk Analysis
- Intellectual Property Theft Assessments
- Interim Incident Response Teams
- Malware and Antivirus Analysis
- Network Intrusion Forensics/Cybersecurity
- Evaluation of Number of Records Breached

For proactive organizations, our team provides a full solution - evaluating security environments from a physical, network and system-level. We also provide differentiated services in evaluating Web-based vulnerabilities that may cause security holes. Our team has worked at some of the largest security and Fortune 1000 companies, such as E*TRADE, Fidelity and Symantec.

We augment IT departments in time sensitive situations, so an organization can get back to business as quickly as possible while minimizing revenue impact. Our team often assists in bridging the gap with law enforcement, legal and compliance agencies to ensure incidents are handled properly and to manage risk.

We are trusted security advisors for proactive organizations seeking a solutions partner for data security and incident response. If your organization seeks to protect your valuable data, we are the best partner for the mission.
